

PRESS RELEASE

Darmstadt, 01.10.2020

**Our project "OMNITURM" (Frankfurt/Germany) has been shortlisted for the International Highrise Award 2020!**

The International Highrise Award is widely recognised as the world's most prestigious award for high-rise buildings. With the so-called 'hip swing' as its most outstanding architectural feature, the jury considers the OMNITURM to be one of the five best new skyscrapers in the world. From a number of 31 nominated high-rises spread over 14 countries, only three buildings from Europe and two from Asia were selected for the final.

BIG – Bjarke Ingels Group delivered the architectural preliminary design and **Pfeifer**INTERPLAN carried out all static calculations (approval design with all specific requirements, e.g. intermediate states of construction, 3D scaffolding structures, continuous columns compressions during the construction progress) and the full execution planning for the load bearing structure of the entire building.

We as engineers feel very much honoured by this nomination, being responsible for the overall stability of this extraordinary building. In total, already now, a great appreciation of this very complex and exciting building!
